Female	CA - So. California Swimming	Practice - Other	Water - Lane Lines	Swimmer was the first one in the lane and was on her way back from the first lap and around middle of the 50m lane. They were supposed to swim on their right hand side. One boy and 3 following up him swam on their left-hand side without being noticed by the coach. Swimmer was turning back into water after breathing when she got hit on the nose bridge part and eyes with goggles on. She got nose-bleeding and lost vision immediately and couldn't open eyes for at least 5mins. Her lane was next to the wall of the pool. She tried to cross the lane and hung on the wall after the collision. Another boy on the deck helped her get out of water after she could open her eyes. After she cleaned up the blood, she was told to go back into the water and stop being weak even without being questioned what had happened. She refused and called home. When I got her in the swimming pool it was almost 8:00 at night. We didn't get a chance to go to the urgent care. As a parent we did think about the concussion but don't have experience about sports injuries especially concussion. I only observed the night after the collision to make sure she didn't have nausea and vomiting. I treated those dizzy and headache as the side effect of the collision and didn't pay enough attention to it until she slept more than 15hours on the 3rd day after collision. She went to see her pediatrician on the following Monday (May 23rd). We were told that she got concussion and lost her balance. Her eyes and face was swollen for one week. Her top teeth was painful when she tried to eat or chew.	As the collision was played well down and swimmer worried about that she would be punished for not showing up in the swimming. She went back to swimming on that Thursday and Friday for very little time because of the strong headache. She got blackout multiple times a day for three weeks after the collision. Her vision dropped from -3.00 to -5.00. She lost her balance for more than 2 months. After the visit to her doctor, we followed up all the instructions for her recovery. The doctor ordered many tests due to the slow recovery and eyes blackout issues.

Male	CA - So. California Swimming	Practice - Other	Water - Start End	Swimmer had been in the water for over an hour of practice. During our kick set he stopped at the wall and said he was having issues breathing. I asked him to get out. He then proceeded to tell me he was allergic to peanuts and thinks he's having a reaction. I asked him where his Epi Pen was. He went to his bag, but he didn't have it with him. I looked at him and could see his left eye was swelling and he was having very shortness of breath. I then took him as well as another parent into the parking lot. While out there we found a parent who had an extra Epi Pen on them. Ethan then took the Epi Pen he still didn't feel well so we ran him across the street to Urgent Care where they took him in.	Swollen eye and shortness of breath.

Female	CO - Colorado Swimming	Meet - Competition	Deck	Coach has a 1.5 yr. history of "pseudo-seizures" Apparently at approx. 12:45pm she experienced her first seizure. As Meet Referee I had not been informed of this incident but was told later that it lasted approx. 15min at which time she slid from her chair to the deck and during the seizure did hit her head against the deck a few times. Once the seizure was over I was told that she informed the pool staff and her coworker not to call 911. Then at approx. 4:45pm during the last heat of the last race I was called over to her location where she was experiencing a second seizure. This was when I was made aware of the first seizure. I found the victim leaning back in her chair being supported by the pool staff having a mild seizure. Her right had was curled up and her body was mildly twitching. She was unresponsive but her airway was clear and she was breathing. I was told that they had called the victims father and that he informed them that they usually just keep her protected and safe from injury and let the seizure subside. I began getting concerned after about 15-20min when the seizure did not subside. I called her father to find out the typical length of her seizures and to discuss calling 911. He said that the seizures at most have lasted 15-20 min. in the past. He asked me not to call 911 and that he was on his way. It would take him approx. 25min to get to the pool. I told him if the seizure lasted too much longer I would consult with the pool staff as it is ultimately their decision to call 911. After approx. 20-25min and periods of the seizure seeming to get worse and then lightening up again, the pool staff decided to call 911. EMS arrived took transported her to their ambulance for assessment and called both of her parents. After about 15min. or so they decided to transport her to Lutheran Hospital. Both parents were notified. Her father actually arrived before the ambulance left the pool.

Female	CO - Colorado Swimming	Practice - Other	Other water	kicking with fins	the parents said it was a sprain
Male	CO - Colorado Swimming	Practice - Other	Water - Start End	At approximately 7:25-7:30pmMST on October 17th, 2016, in between practice intervals for the evening's main set, the injured athlete and another athlete engaged in a brief water tussle. This occurred at the start end of the pool (shallow end) where swimmers were of height to stand up. Within seconds, the injured swimming removed himself from the water, holding the lower wrist/arm. The coach approached from one lane over, and when inquired as to how this had come about, he reported a sharp pain in the area as a result of the other swimmer holding down his arm and "bending the wrist all the way back." Precise timing of the incident was not directly witnessed a staff/coach on deck, but was witnessed by a couple fellow lanemates of both swimmers (aged 11-13).	
Male	CO - Colorado Swimming	Meet - Warm-up	Water - Start End	Swimmer was unaware of his injury until bleeding of right forearm was noticed by his team-mate after he exited the pool at the start end.	Right elbow has a superficial cut that is less than 1/8 of an inch in length.

Female	CO - Colorado Swimming	Other Meet - after session ended	Deck	After the conclusion of the afternoon session today 07/30/2016. The father of a swimmer came up to the starter's table very upset and asked to speak to the Head Official. All of the officials had gathered by the starter's table for end of session briefing. The father said his coach (no name given) had told him that I was going to DQ his son in all of his events. I told him I have not made a decision regarding his son. The father then said do I need to get an attorney to sue you. I then said please let me finish my Official's meeting and I will come talk to you when I am done and sent him on his way. He left and sat on the turn end on the bench by lanes 1-3. I finished my Officials briefing. Several of the Officials were concerned and asked if I was OK. They were concerned with how the parent treated me, what he said and his behavior. One of the Officials offered to go get the Sr. Meet Referee who was attending the meet and the Meet Director. I had talked to the Sr. Meet Referee regarding the Unsportsmanlike Conduct issue. We agreed that I needed to get both sides of the story. I asked both Coaches to send me an email so I would have both sides and I would make a decision in the morning. Both Coaches sent me emails. The Sr. Meet Referee offered to be Seasonal State Official Representative to speak to the father with the Meet Director and Myself. The Sr. Meet Referee asked if I felt threaten, did he (the father) take a step towards you and I said YES to both. The Meet Director informed us that the Safety Marshall is an off duty police officer and if we need him he could be present. I informed someone of the situation and she said to fill out an Incident Report. I feel that the father's behavior was Unsportsmanlike. We then went and spoke with the parents of the swimmer. The Sr. Meet Referee took the lead and explained that his behavior towards an Official could get him banned from the pool deck/venue. The father apologized and admitted he has a hot head when it comes to his kids. We all agreed that we want to protect our kids and do right by them. The father had calmed down once we spoke with him. The mother/wife apologized for her husband's behavior towards me. I did not ask the father to remain off deck/venue since he apologized. Earlier today (07/30/2016): Then this morning the Coach who filed the Unsportsmanlike Conduct requested that I speak to the swimmers after the PM session. I never heard from the other Coach all day. At the conclusion of the afternoon session I went to gather the swimmers and the coaches so we could talk out the situation. I let the swimmer who was filing the complaint speak first than let the other swimmer speak. Then the coaches spoke to both swimmers about what they felt should happen. I then spoke up and said we need to stay positive towards each other, be supportive to each other, and encourage each other to get out there and swim hard. I told them that I do not want to expel both of them. I want them to compete but do it in a positive way. Healthy competition is good no matter what sport you are in. The swimmers shook hands and went on their way. No other issues were brought to my attention regarding this situation for the duration of the meet.

Female	FL - Florida Swimming	Meet - Competition	Water - Start End	Raweart (Pearl) got done with her event, sat down and complained about her side hurting. Eventually she laid down and became very weak. A nurse practitioner arrived on scene before I (lifeguard) did -- when I (lifeguard) arrived on scene I checked and maintained vitals until EMS arrived. I (lifeguard) went through primary and secondary surveys and found that there were no other problems except for her breathing (directly from the facility incident report). Meet Ref -- When I was notified of a swimmer down behind the blocks approximately lane 4. I went to check on the swimmer, I found a unresponsive female behind the blocks -- a timer had notified me that they had phone 911. I rushed back to the starters area to contact the life guards -- during that same period, the lane 1 timer, notified me that she was a nurse practitioner and offered assistance. I went back to the injured athlete and maintained the scene -- her father arrived from the stands about 5-8 minutes after the incident happened, as well as her coach. The father tried to wake her by tapping her foot, approximately 5 minutes later EMS arrived -- she was conscience at that time, visibly upset or shaken (crying) at this point. EMS took the athlete away.

Male	GU - Gulf Swimming	Meet - Warm Down	Water - Turn End	Per athlete statement: While I was warming down, I had just pushed off of the wall and another person swimming butterfly was passing somebody so he was on the wrong side of the pool. I pushed off and we collided. I didn't think much of it but it seems like ever since then, everything has been off. I felt kind of weird going up on the blocks in my final (12/2/2016) last night and I thought it might just be hunger, so I left early after my race and got something to eat but it didn't seem to help. Had trouble sleeping last night (12/2/2016). Came to warm up this morning feeling a bit nauseous. Couldn't find time to talk to before the race in case he thought I should declare a false start. Swam my race and just felt nauseous with a few dry heaves every now and then (one of them during my race). So instead of hanging around at the meet I thought it would be good to go home and get some rest. My whole family has had a cold going on, so it is hard to tell if I am getting sick, but as of right now, no fever.	Felt light headed during race (12/2/16, 12/3/16) Did not think much of incident. Did not seek first aid/medical treatment. Swimmer notified his parents after incident.
Male	GU - Gulf Swimming	Practice - Other	Team Area	I was assisting swimmers with putting on the rubber straps on the swim paddles and some of the younger boys 10 - 11 years of age were playing away from the pool deck some "tag." One of the swimmers was running and slipped on a puddle that was made from the rain of the morning. I did not see him fall but when I turned around he was on the floor holding his elbow.	It seems that when he fell he landed on his elbow and mentioned his wrist hurt. He was a high pain tolerance and while waiting for his mom the pain remained consistent and one could notice swelling on the arm.

Male	GU - Gulf Swimming	Practice - Entering / Exiting Pool	Deck	Swimmer was exiting the pool along with the other swimmers. Coach only saw swimmer fall backward. Hit head hard - other coaches including primary coach heard his head hit the deck. Saw signs of a very short - several seconds - seizure but according to the parent he's never had one before. Swimmer did become non-responsive for those several seconds. After a few moments, the swimmer became aware/ could get up on his own and did - coach had him sit on the bleacher and get ice on his head while the lifeguards filled out an incident report for the facility. Parent took swimmer from practice; as of later on that evening, the parent did not take the swimmer to the doctor/ER, but rather just took him home for rest.	There is only circumstantial evidence that the swimmer sustained a seizure - before or after the fall, so it is not marked as a symptom. There were several seconds when the swimmer was non-responsive, so unconsciousness is marked.

Female	MA - Middle Atlantic Swimming	Meet - Entering / Pool	Water - Turn End	On 8/8/2016 at about 4:15PM, swimmer was getting in for warm-ups at the University of Minnesota Pool for Junior Nationals on Day 1 of the meet. She jumped in feet first into the water, but rolled her left ankle in the process. It was a 7 foot depth where she got in the pool. Afterwards, she swam an uncharacteristic 100 smooth, where she appeared to not look normal as she was swimming. When she got back to the wall, I asked her how she was doing and she said she was not ok. That's when she explained to me that she rolled her ankle and that she couldn't move it in the process. I then pulled her out of the water and sat her on the bench. She started crying, so that prompted me to go get ice from the facility. From that point, I was instructed to go to the trainer and we stayed there for the duration of warmups and well into the finals session of the meet. The athletic trainer on site was very helpful and assisted by evaluating her ankle. She was then taped and asked to come back in the morning for a reassessment and follow-up after warm-ups. The swimmer was asked to come to the trainer as often as needed for an evaluation.	Visited with the University of Minnesota on-site trainer to assess swimmer's ankle injury. She was given ice and had her ankle wrapped on the day of the injury (8/8/2016). She was asked to come as often as needed for the duration of the meet.

Swimmer's hands were wet and hands went back too far during this particular squat, and ball slipped out of hands onto head. The medicine ball was 8 to 10 lbs.	Head ache lasted approximately two weeks. Doctor returned to swimming after five days of headache free with no suggestions for reduced activity. Returned to full 75 min practice only to have headache return for another week. My point - doctors need to be educated about swimming and concussions!!!

Male	MR - Metropolitan Swimming	Practice - Other	Water - Turn End	Swimmer was swimming backstroke to the turn end of the pool. The backstroke flags were not set correctly at the facility. The swimmer used their normal backstroke count and turned over to complete his flip turn. Because the backstroke flags were set too close to the wall, the swimmer turned and flipped and hit his face on the wall.	Multiple scratches and cuts on face. The bulkhead is metal so collision caused cuts. After being dismissed to parents, swimmer was taken to doctor the next day. Was told he had a broken nose.
Male	MR - Metropolitan Swimming	Practice - Other	Water - Start End	In between sets and toward the beginning of the workout, he was accidentally hit in the forehead with a water bottle. One swimmer was holding the water bottle in his hand, moved it under the water while the injured swimmer was coming up quickly toward the surface. Unfortunately, the end of the water bottle forcefully hit his forehead. He immediately got out of the water.	Coach and lifeguard treated the bump on his head with ice packs while he sat down. The first assessment was that it was a bump on the head that could end up bruising. After he was still not feeling well after two ice packs he wanted to get it checked out at the hospital, so he got dressed and the coach took him to the ER a few blocks away. They were seen by the triage nurse and then a doctor and the first assessment was that it was most likely a concussion. The coach stayed with him through this portion until his dad got there.

Female	MR - Metropolitan Swimming	Practice - Other	Water - Turn End	Injured swimmer was passing another athlete as she approached the turn end of Lane 10 of the Nassau County Aquatic Center's 50m Course. As she passed a swimmer, a third athlete pushing off the wall that had completed a flip turn pushed off in the opposite direction. The initial swimmer and the third athlete collided. The swimmer immediately left the water to approach the coach indicating an eye injury. Initially she was upset that she could not open her eye. After calming her down and assessing her injury the coach was able to get her to open her eye, determine she could see out of it and determined if there were signs of a concussion. There were not. An ice pack was immediately applied by a lifeguard on duty to reduce swelling. After the swelling came down a little bit it was observed that there was a small cut across the swimmer's right upper eye lid. It was not bleeding and not fully through the eye lid but was a scratch. For the remainder of the practice the swimmer changed into her normal clothes can back on deck and kept an ice pack on her eye. At the completion of practice, the coach walked the swimmer to her father and informed him of the accident. The swimmer was released to her father.	Swimmer's upper eye was swollen a bit. There was no injury to the actual eye. Her upper right eye lid had a small less than 1 cm cut that did not penetrate through her entire eyelid. She was able to see out of her eye and did not have difficulty opening her eye.

Female	NC - North Carolina Swimming	Practice - Other	Water - Side	Victim exited pool and stated her heart was racing, higher than normal, and that she had "a heartbeat in her throat." Victim drank water, rested 15 minutes on the bleacher, and stated there was no change in her racing heart. Victim's parents were in the parking lot and immediately notified.	Victim was taken to the CMC Steele Creek ER (13640 Steelescort Pkwy; Charlotte, NC 28278; 704-512-5500), and was seen by a Dr. He did not witness an issue with her heart/pulse. The next day, the victim saw her pediatrician, at Rock Hill Pediatrics (704 Gold Hill Rd Ste. 207; Fort Mill, SC 29715; 803-802-5900). He referred the victim to a pediatric cardiologist at Levine Children's Specialty Center (Medical Center Plaza; 1001 Blythe Blvd, Ste 200-E; Charlotte, NC 28203; 704-381-8840). He did not determine a cause, and released victim to return to swimming effective 2/18/2016.
Female	NC - North Carolina Swimming	Practice - Other	Water - Lane Lines	Victim was swimming backstroke due to a shoulder injury while her team was practicing a kick set. Victim was swimming one direction, while swimmers were swimming breaststroke towards her from the other direction. One of these swimmers attempted to pass the other, kicking the victim in the right temple.	After being kicked in the right temple during practice, victim complained of dizziness and stated she'd had a concussion before. Her coach instructed her to sit on the bleacher. Victim applied ice to her temple for 15 minutes and was asked questions to determine if she was coherent. Her mother was contacted, informed of the injury, and took the victim home. Victim was taken to Novant Sports Medicine on 2/10/16 where it was determined she had a mild concussion. She had a concussion baseline from an injury last year. Victim missed a couple days of school, was unable to take tests for a week, is still restricted from any type of physical activity, and still complains of headaches. She has a follow up appointment at Novant Sports Medicine on 2/24/16.

Male	NC - North Carolina Swimming	Practice - Other	Water - Turn End	Swimmer said he bumped his head against the wall while swimming on his back. The backstroke flags were in place correctly and the set the group was doing was the first set of the day which was a "200 easy". From what his father relayed to me on why he hit his head, he replied something to the context of "I was staring at my toes and forgot"	Swimmer as directed to exit the pool and call his parents, which he did. I asked him if he wanted a coach (over 18) to take him home to the care of his family, or to be taken to the hospital - he asked to be driven home. He was driven home at which time I called him twice to check on him and he said his brother was coming home. I then phoned his father and gave him the details. The parents have since communicated to me that he seems to be fine.

Swimmer's left arm (forearm) struck the pool's deep end bulkhead wall while swimming on her back. No open wound. No discoloration. No deformity. No neurological deficits. Minor swelling just below elbow (appr. 2) Swimmer is able to move elbow, wrist and left hand fingers but complains of some pain when she does left arm extension and moving left pinky little finger and left ring finger.
Female	NI - Niagara Swimming	Practice - Entering / Exiting Pool	Water - Start End	The incident happened at the beginning of regular practice. One of our coaches, was assisting others in athlete's age group by explaining warm-up and putting caps on, when she looked over and saw athlete crying. Athlete was holding her head and another swimmer was asking whether athlete was OK. Athlete told Coach that she had jumped into the water, because she had been ready to begin her warm-up routine, and as athlete was surfacing other swimmer jumped in and collided with athlete. Other swimmer stated she had not seen athlete underwater. Coach told athlete to get out of the water. Athlete reported pain in her head and neck. Athlete applied ice to her head and neck for about 20 minutes on the bench while Coach contacted athlete's mother to come pick athlete up. Athlete stated that she had a headache that she had not had prior to practice. When athlete's mother arrived, she took athlete to the locker room to change, so that athlete was not alone in the locker room. Neither athlete nor other swimmer could be more specific about where on athlete's head the contact had occurred, but it seemed that athlete was hit somewhere on the top portion of her head. Athlete's mother later reported that she took athlete in for an x-ray later that night and that the x-ray did not show any fractures.	
Female	NI - Niagara Swimming	Meet - Warm-up	Hallway	After warm-ups, she was walking down a very wet, slippery, uncarpeted hallway when she slipped and fell down onto her left wrist, spraining it.	After swimmer fell, I went to Coach of NCRC to inform her of the incident. The meet director was in the process of getting the meet ready and was not at that moment visible in the pool area. Coach directed swimmer to the lifeguard to get ice. I informed her that people had been slipping on the very wet hallway all weekend. (I found out later that the meet director was not informed by NCRC of swimmer having fell, nor me having filled out an incident report.) Shortly thereafter, someone haphazardly put down two rugs exiting to the wet hallway, but these rugs were not taped down and people were starting to trip on them. The hallway remained wet. Flow of traffic was still not diverted to the opposite, dry, carpeted hallway or any other corrective action taken by NCRC or HHSC until I filed an incident report with NCRC Head Coach at event 63, the point where swimmer said her wrist was really hurting. At this point, NCRC directed the Marshalls to divert the traffic and make sure kids exited the pool down the carpeted hallway, versus the other door leading out to the very wet hallway. However, it was a little too late, as the meet was almost over. I filed the incident report with the NCRC coaches Sunday evening, January 10, 2016, however, they have yet to enter it here into the system as of Wednesday, January 12, 2016. When I called USA Swimming and spoke with George Ward, he told me to file this report myself, to collect and itemize all medical bills. He added that NCRC should have filed by now and that USA Swimming would be looking for it. He added that if and when NCRC were to file their report, it would not negate this report and that USA Swimming is willing to help us in anyway possible. However, Mr. Ward strongly encouraged me to get word to NCRC to get their own version of the incident reported. In doing so through email, the head coach of NCRC, informed me that he wouldn't be back to Eden until Monday, January 18th, and that he would file then. At that point, I responded back that he should have reported it Sunday night/Monday morning and to please do so ASAP. Swimmer's TWST head coach also sent him a similar email, to please report it. After conversing with Mr. Ward, it is known that NCRC is negligent on several points: 1) not having notified the meet director that this incident happened when it did, 2) not filing the incident report with USA Swimming in a timely fashion, and 3) not filing it with Eden Jr/Sr High School in a timely fashion. I had a very nice conversation with the meet director and informed him that swimmer is doing well, and that I was sorry that this happened, but thanked him for his support and dedication to the sport. I am hopeful that NCRC files their report in short order. Swimmer's wrist is being attended to with rest and ice. Two EAST swim coaches stopped to ask swimmer if she was ok, but she didn't know their names. XXX, another swimmer from NCRC, also came over to ask swimmer if she was ok. I do not have his address.
Female	NI - Niagara Swimming	Practice - Other	Water - Turn End	Swimmers were in shallow end of the pool during a swim set. Parent of injured swimmer noticed that the injured swimmer was shaking with face in water and notified coach and lifeguard. Lifeguard went directly to the swimmer and lifted swimmer up so her face was out of water. Lifeguard, coach and parent lifted injured swimmer out of water and laid her on deck while protecting her head. A pullbuoy was placed under her head and towels were put on her to keep her warm. Injured swimmer was lethargic but responsive. 911 was called. Paramedics arrived and gave care to injured swimmer. Injured swimmer went to hospital in ambulance. Injured swimmer was released from hospital that evening, diagnosis ambiguous and medically restricted from swimming until further notice.	small cut in corner of eye from face hitting lane line

Male	NI - Niagara Swimming	Meet - Competition	Water - Start End	Swimmer fell off block and into water	
Female	NI - Niagara Swimming	Practice - Other	Water - Lane Lines	Accident occurred during regular practice time at Penfield High School pool, in lane 1. Injured athlete had a head-on collision with another swimmer who had made a turn and chosen the wrong side to continue her swim. The other swimmer had no physical complaints, expressed her concerns for injured athlete, but was able to continue with her practice. Injured swimmer continued to the wall, appeared to panic a little bit when Coach inquired if she was alright, and got out of the pool.	At the point of the injured athlete's exiting the pool, Coach observed a little bit of hyperventilating but the injured athlete seemed lucid. She explained to Coach that she had heart rhythm issues and that there was a danger of her blacking out. When asked what she usually did in those situations, the injured athlete replied she must stay seated/not lie down. She explained she had a heart monitor that can help with this, but her monitor was at home. During these explanations, the injured athlete seemed to calm down. The head coach came over and checked on her as well. When the head coach walked away from the injured party, the injured athlete's eyelids fluttered. She asked, quite clearly, for her mother to be called and was able to provide the phone number. The injured athlete then began hyperventilating. The head coach returned to the injured athlete and provided a paper bag for her to breathe into, which the injured athlete did not do, or did not manage to do well. The injured athlete went in and out of calmer and more agitated states. She stated that her head hurt but that her problems were "definitely the heart." When the coaches considered calling 911, she clearly stated "please don't call." The coaches deferred the decision to call 911 only because the mother was clearly on her way and had been close by to begin with. The injured athlete's pulse was fluttering at the neck very fast. At one point, the head coach asked the injured athlete to tell her home address, to which the injured athlete replied with what probably was the correct address, but her speech was very slurred. This was in contrast to other moments when her speech seemed clear. The injured athlete's eyes alternated from normal to being half open, with an overall look of being close to fainting. Head coach observed the injured athlete's hands at one point, temporarily, forming claws, as if cramping. The injured athlete's older sister, who was at practice as well, got out of the water and helped care for the injured athlete. Her mother came. Her mother and her sister walked the injured athlete away from the pool. The injured athlete looked unsteady on her feet, holding her family's hands, but walked on her own. The family notified a doctor afterwards (who was a swim mother on the team and had walked in after the injured party had left).
Male	NI - Niagara Swimming	Practice - Other	Deck	Per swimmer: I was sitting on deck next to the starting block to put my goggles on. Female	OR - Oregon Swimming	Meet - Warm-up	Water - Turn End	Swimmer reported that as she did 3rd turn in her leg of 400 freestyle relay, as her feet hit the wall she felt sharp pain in lower back. She completed length and was able to get out of the pool on her own. Her coach came to start end to see her and helped her get to a bench behind starting area. Coach left to get her ice and mom showed up at starting area. Once coach returned they placed ice on her lower back, she stood on her own and mom assisted her leaving pool deck as she walked on her own. Coach scratched her from her individual event and recommended she go to see a doctor. Mom agreed to scratch but decided to stay at pool to determine if she could swim relay or time trial. In the end mom decided to leave and check in with doctor as swimmer did not want to compete.	
Female	OR - Oregon Swimming	Practice - Other	Deck	Swimmer arrived on deck getting ready to begin practice. While waiting for one squad to exit the water so her squad would enter the water she started a game of imaginary catch with an invisible ball. As she reached out for the ball she started to fall in a strange way. Once she hit the deck she immediately grabbed her knee. Frankly, it is unclear exactly when the knee cap came off her knee and wrapped itself over to the side of her leg.	Swimmer arrived on deck getting ready to begin practice. Male	OZ - Ozark Swimming	Practice - Other	Water - Turn End	Swimmer was approaching a backstroke turn and miscounted his approach. He hit his head and arm on the wall. Two coaches witnessed the impact. It did not appear severe. The Swimmer was rubbing his head as one Coach approached to check on him. Coach checked to see where he was hurting. The swimmer was rubbing his head. He said his head was sore from the impact. Coach asked him if he was dizzy or unable to move to the ladder. Swimmer indicated he was not dizzy and that the only thing that hurt was his head. When specifically asked swimmer indicated that his neck was not in pain and that his hands and feet did not sting or were numb. Coach directed him to walk along the wall to the ladder in order to exit the pool once the soreness subsided he felt ready. Swimmer exited the pool by the ladder. He did not seem unsteady, confused, or disoriented. Coach directed the swimmer to sit down on a nearby bench. Coach checked the swimmer to see where it hurt and to see if he seemed dazed or confused. The swimmer answered all questions clearly and seemed to have no problems communicating with Coach. When asked the swimmer indicated the side of his head was stinging. When asked the swimmer indicated he had never had a previous concussion, but had been hit on the head at school earlier that day. This was the first time the swimmer had mentioned the previous injury. Coach told the swimmer he would be sent home, since he had a prior injury to the head earlier that day and it was risky for him to continue swimming unless cleared. Coach continued to check the swimmer for signs of a concussion. When specifically asked the swimmer denied being dizzy. When specifically asked the swimmer said the lights were bothering his eyes. Coach helped the swimmer gather his equipment and escorted him to the lockerroom so he could contact his parents with his cell phone. Coach gave the swimmer a cold compress from medical gear kept at the pool. The swimmer called his mother using his cell phone, and Coach spoke with her. Coach told her her son had hit his head during a turn and that her son had indicated that he had been hit in the head at school earlier that day. The swimmer's mother indicated that she was outside in the parking lot and told Coach to send her son outside to the car. Coach told her he would be sending her son out with his assistant Coach. Coach left the locker room in order to allow the swimmer to change into his street clothes in private. The swimmer exited the locker room and the Assistant Coach followed the swimmer to his mother's car. The Swimmer's mother told of his condition and everything he had said up to that point, and was asked to keep an eye on her son and to let Coach know how he is doing later that night. Then the swimmer left with his mother.	Swimmer did not appear dizzy, disoriented, or confused throughout his interactions with the Coach. He did indicate a sensitivity to lights after Coach asked him specifically if the lights hurt his eyes. He indicated he felt like he hit the top of his head on the wall, but felt pain on the side of his head. From the Coach and Assistant Coach's position on the deck, it was unclear if the swimmer had turned his head at impact so neither could determine if the swimmer had in fact hit the side of his head where the pain was.
